APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY SEVENTH SEMESTER B.TECH DEGREE EXAMINATION(S), MAY 2019

Course Code: CS407

Course Name: DISTRIBUTED COMPUTING Max. Marks: 100 Duration: 3 Hours PART A Marks Answer all questions, each carries 4 marks. List and explain the three generations of distributed systems. (4) Differentiate synchronous and asynchronous between Process (4) Inter Communication. 3 What are the different placement strategies followed in a distributed system. (4) Explain briefly any four transparency requirement for distributed file system. 4 (4) Differentiate between forward and backward validation. Which is better? (4) Mention the factors that evaluate the performance of communication channels. 6 (4) How does Andrew File System ensure that the cached copies of files are up-to- (4) date2 With an example describe the working of ring based election algorithm. 8 (4) Why are hierarchic locks required? Explain with example. 9 (4) In Maekawa's Voting algorithm for all i,j=1,2,...,N; Pi belongs to set Vi, what (4) 10 problems can arise if the sets Vi are chosen so that Vi \land Vj = ϕ . PART B Answer any two full questions, each carries 9 marks. a) How can the security of a distributed system be achieved? How can processes (5) and their interactions be secured? Distinguish between mini computer model and work station model. (4) Consider two communication services for use in asynchronous distributed (9) system. In service A, messages may be lost, duplicated or delayed and check sums apply only to headers. In service B, messages may be lost, delayed or delivered too fast for the recipient to handle them, but those that are delivered arrive with the correct contents.

. 8

take place to the election message as it passes through all the processes?

If process P10 initiates election after how many message passes will the

coordinator be elected and known to all the processes. What modification will

P20->P5->P10->P18->P3->P16->P9
